Lexus redefines power and efficiency with the introduction of the LX 700h

Doha, Qatar – 15 February 2025: Al Abdulghani Motors, the authorized distributor of Lexus in Qatar, proudly announces the arrival of the landmark LX 700h and enhancements to the LX series.

The LX 700h represents a significant milestone in Lexus's commitment to carbon neutrality, combining a newly developed hybrid system with the renowned reliability, durability, and off-road performance that define the LX line.

The LX 700h features a newly developed hybrid powertrain which integrates a motor generator (MG) with a 3.5L V6 twin-turbo engine and a 10-speed automatic transmission, ensuring seamless transitions between engine and motor operation. This latest system retains classic LX features such as full-time 4WD, a Lo-range transfer case, while significantly lowering emissions.

Enhanced structural elements ensure durability and performance are uncompromised, even with the added hybrid components.

The LX 700h delivers robust acceleration and enhanced off-road control thanks to the introduction of motor-driven power to the Lo-range. The Multi-Terrain Select system further optimizes handling across various terrains. Refined Lexus Driving Signature enhancements improve on-road agility and off-road capability.

Both engine and hybrid variants benefit from the new functions brought about by the introduction of the hybrid model including a 12.3-inch full LCD meter that provides clear displays of essential driving information, such as auxiliary battery voltage and engine oil pressure.

The LX also introduces the OVERTRAIL edition, featuring exclusive equipment like a black gloss spindle grille, matte gray aluminum wheels, unique interior trim, and enhanced off-road tires.

The exclusive “Moon Desert” body color, with metallic shading, enhances its premium appearance as part of a six-color palette. Inside, the monolith-themed interior pairs low-

saturation upholstery with ash burl black ornamentation, blending Lexus' refinement with off-road sophistication.

Advanced safety features abound, including the latest Lexus Safety System+ with Proactive Driving Assist, Pre-Collision Safety, and Driver Abnormality Response System. Lexus Teammate technologies like Advanced Drive and Advanced Park further enhance convenience and safety. A new Rear Air Conditioning Automatic Activation Control optimizes cooling efficiency in Qatar's climate.

Visit the Al Abdulghani Motors showroom to experience the new Lexus LX 700h and the enhanced LX series first hand by scheduling a test drive, or visit the Lexus [website](#) to learn more.
